Transform the sound of your space.
Stille
Overview

Stille designs and manufactures acoustical panels that enhance the visual style of any space while also reducing unwanted noise. Add Stille panels to your space and listen to the difference. The perfect solution for open offices, conference rooms and anywhere else beautiful design is desired.

Stille acoustic panels add color and design to any space while absorbing extra noise. Stille panels are manufactured in the USA using recycled PET plastic bottles, which can help gain LEED™ green building credits.

Stille is established in a new era – we develop products by the standards of today. This means we produce efficiently, use the full life-cycle of products and eventually give them a new life.
Wall Art Collection

Explore your visual needs with our wall shapes. Go bold or make your designs completely blend in. Many colors and shapes; flat or 3-D designs. The options are endless.

Ceiling Applications

Today's expansive spaces with high ceilings and hard flooring are visually stunning, however, often times create deep acoustical problems.

Echo and reverberation occur when sound waves bounce back and forth between hard surfaces.

Acoustic solutions in a busy open office of a lobby can help create the atmosphere the space was intended for, without taking away from the architects' and the designers' esthetical vision.
Sound dampening and sound absorption can come from unexpected places.

There are many ways to introduce sound absorbing materials into your space. Instead of traditional light fixtures that add yet another hard surface, consider adding a beautiful, natural looking Fella fixture. Besides it being a stunning source of light, it will also serve to dampen the surrounding echoes and reverberations.
Acoustical Furniture

Looking for something even more innovative; even more unexpected? For your next project, choose furniture that will mitigate the sound issues that come with open spaces instead of adding to it.

Stille has a beautiful line of acoustical pieces to choose from; or better yet Stille will be happy to collaborate with you and make your own furniture design a reality.
Specialty Applications

Say hello to Melo!

Sometimes sound absorption needs to be also accompanied by additional ambient sound to truly make a space work.

The sounds of summer rain or a drum line filling up your space, allowing for deeper focus without creating a distraction. Cleverly hidden in an acoustical wall art, easily paired with any Bluetooth device.
